

Fund Administration Since 1997

Software Developer – Job Description

SGGG Fund Services Inc. (SGGG-FSI) is currently seeking to fill a full-time permanent position for the role of Software Developer. The successful candidate joining our existing software development team will be energetic, enthusiastic, reliable, and will have the opportunity to contribute to an effort in the development of financial services industry leading software.

Under the direction of the Software Development Manager, the Software Developer position is responsible for the development, enhancement and testing of our system that is developed exclusively in-house. The role will also be responsible for the delivery of applications which meet the needs of users, in a timely and effective manner. You will work with business analysts and end-users of the system to define requirements and manage team deliverables. This represents a unique opportunity to be part of an established agile software development team that develops and implements new cutting-edge applications.

Core Responsibilities

- Development of software that meets the requirements that are provided by business analysts
- Work with users to develop functional requirements as an input to application design
- Developing and testing detailed functional designs
- Application design, development, testing, and deployment activities
- Be available for limited application support after business hours
- Develop a professional and productive relationship with SGGG-FSI staff
- Keep management informed of any and all issues that could have a Customer impact
- Work to continually improve the processes associated with your assigned functions

Qualifications

Technical

- Functional knowledge of object-oriented software design and development
- Expertise in C# .NET application development, coding, testing, deployment & maintenance
- Experience with ASP.NET MVC and AngularJS is an asset, but not required
- Working knowledge of relational database development utilizing MS SQL
- Knowledge of WCF and XML web services, and the Service Oriented Architecture pattern
- Proven track record of delivering software projects, on time

Work Experience

- 5-7 years of overall application development experience.

Fund Administration Since 1997

SGGG

FUND SERVICES INC.
