

An Advisor's Essential Guide to Alternative Funds in Canada

Presented by:

ScotiabankTM

June 2023

1

AIMA is pleased to offer a number of public resources to help investors and advisors navigate the Alternative Fund landscape in Canada.

Alternative investments are an essential part of long-term asset allocation, long incorporated by Canada's leading institutional allocators to provide risk reduction, non-correlated returns and diversification to investment portfolios.

Canada is proud to be home to a robust community of alternative investment firms, managing hedge funds, alternative mutual funds, alternative ETFs and private debt funds. These strategies can be implemented on an evergreen basis to reduce portfolio volatility and provide diversified return streams in retail investor portfolios.

While allocations should always be fully informed by the KYP & KYC process with proper due diligence, these strategies can provide downside protection, acting as portfolio insurance through inevitable market volatility and improving wealth preservation, a testimony to the value of active management. Short selling can be an excellent tool for mitigating undesired ESG risk as well.

AIMA Canada, first founded in 2003 as part of a global network, represents our local alternative investment industry with regulatory advocacy & guidance, thought leadership and educational resources for investors in the form of research, events and media communication.

Whether you are a new or veteran investor in alternative investment funds, this AIMA Advisor Guide highlights key resources for wealth advisors and their clients alike, providing due diligence questions, investor education videos, continuing education presentations and more. For more detailed reading on the alternative investment industry, we encourage you to reference the [AIMA Canada Handbook 2019](#) and visit aima.org for more research and education.

We look forward to leading and supporting your educational journey as alternative investments play a crucial role in investor portfolios, today and going forward.

Putting Alternatives to Work in Your Portfolio

AIMA

Think of your balanced portfolio like a HOCKEY TEAM

L-DEF LW RW R-DEF

3-4 lines of talent

- ✓ 2 wingers
- ✓ 1 balanced/all-around centre
- ✓ 2 defence
- ✓ 1 goalie

Similar to a team, an investment portfolio requires that you balance who is playing offence (getting returns) versus defense (protecting on the downside).

Most hedge funds act like your defence or goalie. They can still score goals, but are mostly working to protect the downside.

?

Did you know? Investors value the broader toolkit available to alternative investment managers for the diversification, volatility reduction, downside protection and non-correlated return benefits they can provide.

Market volatility happens. Then what?

Hedge funds and alternative investments provided better protection than equities and bonds in periods of extreme market volatility.

Hedge funds and alternative investments helped protect on the downside.

Think of it as buying insurance for your home. Alternatives can act as insurance to minimize losses during market corrections.

You're in good company.

Who invests in alternative investments globally?

Hedge funds play a vital role globally for the institutions that look after everyone's pension and savings.

Average allocation to alternatives by advisors globally: **10%**

(Source: Preqin)

Alternatives are closer to home than you think.

Everyday Canadians already invest in alternative investments.

CPPIB Portfolio and Performance

*Reporting to Fundata, as at August 8, 2019

Before you allocate, what should you look for in a hedge fund manager?

Investment Manager

What is the background and experience of the investment manager & the investment team?

What is the governance surrounding the investment manager & investment team?

How do they manage risk? (independent reporting lines, operational risk management, conflicts of interest, etc.)?

What is their compliance culture?

Are members of the senior investment management team personally invested in the fund?

Investment Strategy

✓ What is the fund's investment objective and principal investment strategies?

✓ From where are the underlying positional data, market data and any underlying models sourced for this strategy?

✓ Are there position limits and how are they monitored?

✓ How much financial leverage does the fund use on average? Limits? Sources?

✓ Are there any capacity constraints?

✓ Performance history?

✓ In what type of markets would this strategy be expected to outperform or underperform?

✓ How long would it take in normal market conditions and stressed market conditions to liquidate the fund without incurring unusual costs?

✓ Have the objectives of the investment strategy changed in the past 5 years? Has there been any style drift?

✓ Who makes the portfolio management decisions and how are they made?

✓ What method(s) does the investment manager use to measure the total risk of a portfolio using this strategy?

✓ Offering documents, subscription agreements, and process for purchases and redemptions? Fees? Performance fees and calculation methodology?

✓ What is the fund's valuation policy and the frequency of valuation?

✓ What portfolio data does the investment manager provide to investors, and with what frequency and time lag?

✓ Who are the outsourced service providers of the fund (i.e., prime broker, auditor, custodian, administrator, legal)?

Not all alternatives are alike.

Hedge Fund Performance During Market Corrections

Putting Q1 performance into historical context, and the biggest drawdowns over the past twenty years, hedge funds have preserved investor capital and mitigated the downside better than an investment in equities.

After prior market sell-offs, hedge funds have consistently been quicker to make recovery.

Modernization of Investment Funds Under NI 81-102 Investment Fund Product Comparisons

Overview of the Modernization Project

The amendments to NI 81-102 consolidated the regulation of publicly offered mutual funds, closed-end funds, commodity pools and Exchange Traded Funds (ETFs) under one rule.

The differences between alternative mutual funds and privately offered investment funds (hedge funds) as well as the distinguishing features between alternative mutual funds, closed-end funds and conventional mutual funds are summarized in the tables below.

Key Differences Between Alternative Mutual Funds and Privately Offered Hedge Funds – at a Glance

Even though alternative mutual funds provide investment flexibility when compared to conventional mutual funds, they are relatively limited compared to the diverse investment strategies that may be utilized by privately offered investment funds (hedge funds). In addition, the Canadian securities regulatory regime imposes obligations on alternative mutual funds that are significantly different from those applicable to hedge funds.

The key restrictions and reporting obligations applicable to alternative mutual funds relative to hedge funds are set out in the following table:

	ALTERNATIVE MUTUAL FUNDS	HEDGE FUNDS
Eligible Investors	Available to the retail investors.	May only be distributed on a “private placement” basis in reliance on a prospectus exemption and are typically sold to high net worth investors that qualify as “accredited investors”.
Key Documents/ Ongoing Disclosure Requirements	Publicly filed simplified prospectus, annual information form, fund facts document, audited annual and interim financial statements and management reports of fund performance. Mandated leverage disclosure in annual and interim financial reports. Top 25 portfolio holdings disclosed quarterly.	Investors typically receive an offering memorandum and audited annual and interim financial statements (which are not publicly filed). No mandated leverage disclosure or disclosure of top portfolio holdings.
Governance	Independent Review Committee requirement.	No specific governance requirements.
NAV Calculation	Alternative Mutual Funds: Daily.	Hedge Funds: Daily, Weekly, Monthly (most common) or Quarterly depending on frequency of subscriptions and redemptions.

	ALTERNATIVE MUTUAL FUNDS	HEDGE FUNDS
Redemption Rights	Daily (most common) or weekly as specified in Prospectus.	Weekly, monthly (most common) or quarterly. Monthly redemptions typically require a minimum of 30 days advance notice prior to the applicable redemption date.
Initial Holding Period	None, although managers may utilize Short Term Trading Fees as a disincentive and new alternative mutual funds have the ability to have an initial freeze on redemptions for the first 6 months from date that the fund is first offered, all as specified in the prospectus.	Generally none, but may be 4, 6 or 12 months or longer.
Redemption Proceeds	T+2	T+2
Risk/Compliance Management	Daily monitoring of portfolio vs permitted limits in NI 81-102 and any other investment restrictions described in the prospectus.	Regular monitoring of portfolio vs investment restrictions of fund and restrictions generally imposed under applicable securities laws.
Performance/ Incentive Fees	Permitted, subject to the requirement that a performance fee may only be paid based on performance which has occurred since the time that a performance fee was last paid.	Permitted (no limitations)
Borrowing (cash and / or securities)	Limited to 50% of NAV (subject to an aggregate 50% of NAV limitation on short-selling and borrowing).	No limit
Short-Selling	Limited to 50% of NAV (subject to an aggregate 50% of NAV limitation on short-selling and borrowing), no cash cover required.	No limit
Leverage	Maximum of 3X (excludes hedging via specified derivatives).	No limit

	ALTERNATIVE MUTUAL FUNDS	HEDGE FUNDS
Concentration Limit – issuer level	20% of NAV, subject to carve-outs (does not apply to short sale of government securities).	No limit
Illiquid Assets	10% of NAV at initial investment; 15% hard-cap.	No limit
Restrictions on Investment	No investment in: real property; mortgages, other than guaranteed mortgages; or Loan syndications / participations if any responsibility to administering loan.	No limit
Risk ratings	As per NI 81-102, all Funds must have a risk rating as per the CSA's methodology.	No risk rating requirement
Fund of Fund investments	May invest up to 100% of NAV in underlying alternative mutual funds, non-redeemable investment funds, conventional mutual funds and ETFs funds. Underlying funds must be NI 81-102 Funds and a reporting issuer in at least one Canadian jurisdiction. Investing in private pooled funds prohibited.	No limit

Comparison of Alternative Mutual Funds, Closed-End Funds and Conventional Mutual Funds

	ALTERNATIVE MUTUAL FUNDS	CLOSED-END FUNDS	CONVENTIONAL MUTUAL FUNDS
Definition:	A mutual fund, other than a precious metals fund, that has adopted fundamental investment objectives that permit it to invest in physical commodities or specified derivatives, to borrow cash or engage in short selling in a manner not permitted under NI 81-102. Investment funds that were formerly referred to as "commodity pools" and were governed by NI 81-104 are now designated as alternative mutual funds and are governed by NI 81-102.	N/A	N/A
Concentration Limit:	20% of NAV	20% of NAV	10% of NAV
Investments in Physical Commodities:	May invest in precious metal certificates, permitted precious metals, physical commodities or specified derivatives of which the underlying interests are physical commodities.	May invest in precious metal certificates, permitted precious metals, physical commodities or specified derivatives of which the underlying interests are physical commodities.	May invest up to 10% of NAV in permitted precious metals, permitted precious metal certificates or specified derivatives of which the underlying interests are physical commodities.
Illiquid Assets:	10% of NAV with hard cap of 15% of NAV.	20% of NAV with hard cap of 25% of NAV.	10% of NAV with hard cap of 15% of NAV..
Short Selling Limit:	50% of NAV	50% of NAV	20% of NAV
Single Issuer Short Sale Limit:	Market value of 10% of NAV excluding shorting of "government securities".	Market value of 10% of NAV excluding shorting of "government securities".	Market value 5% of NAV.

	ALTERNATIVE MUTUAL FUNDS	CLOSED-END FUNDS	CONVENTIONAL MUTUAL FUNDS
Limit on portfolio assets pledged as security with a borrowing agent (other than the custodian or a sub-custodian) in connection with Short Sale Transactions:	25% of NAV	25% of NAV	10% of NAV
Cash Borrowing Limit:	Up to 50% of NAV	Up to 50% of NAV	Not permitted for investment purposes.
Combined Short-selling and Cash Borrowing Limit:	50% of NAV	50% of NAV	N/A
Use of Specified Derivatives:	May be used for investment purposes (including hedging) and/or to create synthetic leverage.	May be used for investment purposes (including hedging) and/or to create synthetic leverage.	Primarily for hedging purposes.
			Limited to 10% of NAV for purposes other than hedging.
Derivative Counterparty Rating and Exposure Limits:	Can deal in specified derivatives (OTC) or with counterparties that do not have a designated rating.	Can deal in specified derivatives (OTC) or with counterparties that do not have a designated rating.	Must deal in specified derivatives and/or counterparties that have a designated rating.
	Mark to market value of exposure under specified derivatives positions (other than cleared specified derivatives) with a counterparty that does not have a designated rating must not exceed 10% of NAV for a period of 30 days or more.	Mark to market value of exposure under specified derivatives positions (other than cleared specified derivatives) with a counterparty that does not have a designated rating must not exceed 10% of NAV for a period of 30 days or more.	Mark to market value of exposure under specified derivatives positions with any one counterparty must not exceed 10% of NAV for a period of 30 days or more unless: (i) the specified derivative is a cleared specified derivative, or (ii) the counterparty/guarantor of counterparty's obligations has a designated rating.

	ALTERNATIVE MUTUAL FUNDS	CLOSED-END FUNDS	CONVENTIONAL MUTUAL FUNDS
Fund of Fund Investments:	May invest up to 100% of NAV in conventional mutual funds, other alternative funds or non-redeemable investment funds that are subject to NI 81-102.	May invest up to 100% of NAV in conventional mutual funds, other non-redeemable investment funds or alternative mutual funds that are subject to NI 81-102.	May invest up to 10% of NAV in alternative mutual funds or non-redeemable investment funds that are subject to NI 81-102. May invest up to 100% of NAV in another conventional mutual fund that is subject to NI 81-102.
Leverage and Leverage Calculation Formula:	300%, calculated as aggregate value of indebtedness under borrowing agreements + aggregate market value of short positions + aggregate notional value of all specified derivative positions minus specified derivatives used for hedging purposes.	300%, calculated as aggregate value of indebtedness under borrowing agreements + aggregate market value of short positions + aggregate notional value of all specified derivative positions minus specified derivatives used for hedging purposes.	N/A
Incentive Fees:	Permitted, provided that the basis of calculation must be described in the simplified prospectus and subject to the requirement that a performance fee must only be paid based on performance that has occurred since the last time a performance fee was paid.	Permitted, provided that the basis of calculation must be described in the simplified prospectus and subject to the requirement that a performance fee must only be paid based on performance that has occurred since the last time a performance fee was paid.	Permitted provided that the basis of calculation must be described in simplified prospectus and incentive fee must be calculated in reference to a total return benchmark or index.

	ALTERNATIVE MUTUAL FUNDS	CLOSED-END FUNDS	CONVENTIONAL MUTUAL FUNDS
Redemption of Securities:	If disclosed in simplified prospectus, permitted to suspend redemptions for first 6 months after date of final simplified prospectus.	Redemption price must not be more than the NAV determined on a redemption date specified in the prospectus or annual information form.	Redemption price must be NAV next determined after receipt of the redemption order.
	Otherwise, may redeem at NAV determined on the first or second business day after date of receipt of redemption order and pay redemption proceeds within 15 business days.	Redemption proceeds must be paid no later than 15 business days after the valuation date on which the redemption price was determined.	Redemption proceeds must be paid within two business days after the determination of the redemption price.
Custodial Arrangements:	Removes requirement for affiliates of domestic and foreign banks and trust companies to have "publicly available" financial statements showing minimum level of equity.	Removes requirement for affiliates of domestic and foreign banks and trust companies to have "publicly available" financial statements showing minimum level of equity.	Removes requirement for affiliates of domestic and foreign banks and trust companies to have "publicly available" financial statements showing minimum level of equity.
Seed Capital:	\$150,000 that may be redeemed once \$500,000 from outside investors is received.	\$150,000 that may be redeemed once \$500,000 from outside investors is received.	\$150,000 that may be redeemed once \$500,000 from outside investors is received.
Ability to Charge Organizational Costs and Preparation of Initial Offering Documents to the Fund:	No	Permitted for exchange-traded mutual funds that are not in continuous distribution.	No
Offering Documents:	Simplified Prospectus, Annual Information Form and Fund Facts.	Long Form Prospectus, Annual Information Form and Fund Facts/ETF Facts.	Simplified Prospectus, Annual Information Form and Fund Facts.

Alternative Funds, Your Firm and You: Advisor Questions for the Dealer Head Office

By:

Alana Johnston Gould

Director, Prime Services Capital Introduction
Scotiabank Global Banking and Markets

Alison Marsh

Associate Director, Prime Services Capital Introduction
Scotiabank Global Banking and Markets

No two firms will be exactly alike in their approach to recommendations and requirements around the purchase alternative funds, but there are common questions an advisor can ask their dealer head office to help determine what the right next step for them is.

Alternative funds can include traditional hedge funds and private credit that are sold through an Offering Memorandum, and alternative mutual funds (also called 'liquid alts') that are offered through a prospectus. Here are some common questions an advisor can ask their head office to help them learn more about these products.

What is an appropriate portfolio allocation to alternative funds?

Some Canadian firms provide guidance for advisors on allocations to alternative funds. Recommended sizing might range from 0 – 25%+ of a portfolio, depending on a clients' risk tolerance, time horizon and objectives. Advisors can lean on their firm's portfolio advisory team to provide assistance on the tactical allocation model that may be appropriate for a client's goals.

What funds are approved at our firm and do we have an alternative funds recommended list?

Many firms publish an approved list of alternative funds on their shelf as well as a more concentrated recommended list, which can be excellent starting points for advisors exploring the use of alternative funds. These funds are generally pre-screened for advisors using quantitative and qualitative models. Portfolio advisory groups may also provide detailed information about how to use these products within the firm's tactical allocation model.

What are the qualitative and quantitative factors used at our firm to screen alternative funds?

Each firm has their own process and preferences. Some of the factors commonly used are:

Quantitative

- Fund size (Assets Under Management)
- 5-year and/or 3-year performance
- Sharpe ratio
- Volatility (standard deviation)
- Correlation/beta to a benchmark
- Upside/downside-capture ratios
- Historical market drawdowns

Qualitative

- Governance
- Organizational resources
- Investment philosophy
- Mandate and objective
- Risk management framework
- Fund terms
- Fund liquidity
- Brand recognition and manager pedigree

What is the internal risk rating of the product?

Many dealers place an internal risk rating on alternative funds. While many dealers typically accept the prospectus risk rating for alternative mutual funds and alternative ETFs, historically, many private alternative funds have been rated high risk by firms, which had a significant impact on investment allocated to Offering Memorandum products in client portfolios. This high risk rating may not necessarily reflect the historical risk-adjusted return of the specific fund or strategy. Internal risk ratings have been slowly adopting more favorable ratings to better reflect the historical risk metrics of the funds being reviewed. Many firms now have alternative funds on their product shelves with medium, and low risk ratings, opening up more portfolio space for these investments. AIMA & CAIA have published further research and guidance on risk ratings [here](#).

How can I buy an alternative fund and it what format?

There are several formats for buying alternative funds including the traditional Offering Memorandum (OM) format and many funds can offer bulk e-subscription and e-signature documentation where relevant. Alternative mutual funds can also be purchased through Fundserv in the same manner as traditional mutual funds. Some alternative funds now also offer ETF versions available, further allowing for block orders and splits across discretionary accounts. Different fund structures offer unique benefits and constraints from an investment, risk and liquidity perspective. It is important to work with the fund company and the client to determine the best fit. AIMA & McMillan LLP have published more information on fund structure differences [here](#).

What paperwork might be required to purchase alternative funds?

Some dealers and investment management firms require additional documentation to be signed by either the advisor, investor or both, to adhere to regulatory and compliance practices. Become familiar with these templates, which are often straightforward to complete.

What additional resources are available on alternative funds?

There are several ways to learn more about alternative funds. Firstly, firms may have white papers and internal training programs on alternatives. Some are running educational presentations, webinars, and panels on alternative funds. Secondly, capital introduction services and educational events provided by prime brokers are available. Thirdly, industry organizations like AIMA publish valuable education on the alternative sector and can provide resources including CE Credit courses, due diligence checklists and more. Finally, many alternative managers are open to arranging branch visits and one-on-one meetings or, more recently, Zoom calls to give in-depth information on their funds and how they can be used in a portfolio. Other managers offer detailed portfolio analytics that will model the effects of adding alternative funds to an advisor's portfolio.

Advisors should consult their firm's requirements to recommend or facilitate the purchase of alternative funds. For more information, contact your dealer head office.

Incorporating an Anti-Beta Strategy into a Portfolio

AGF Investments: Case Study

An anti-beta strategy that allocates to U.S. equities in both long and short positions provides the potential to generate positive returns regardless of the direction of the general market. Adding a strategic hedge in the form of an anti-beta strategy can smooth out the return profile, lower volatility and reduce the impact of drawdowns.

Correlations	Anti-Beta Strategy	US Equities	Global Equities	Global Bonds
Anti-Beta Strategy	1.00			
US Equities	-0.44	1.00		
Global Equities	-0.53	0.94	1.00	
Global Bonds	0.44	0.08	0.06	1.00

Source: Morningstar Direct & Bloomberg. Period: September 2011 – April 2023. In Canadian Dollars. S&P 500 Total Return Index (US Equities), MSCI ACWI Index (Global Equities), Bloomberg Barclays Global Aggregate Bond Index (Global Bonds), Dow Jones US Thematic Anti-Beta CAD-Hedged Index (Anti-Beta Strategy). For illustrative purposes only. One cannot invest in an index.

Implementation Considerations for an Anti-Beta Strategy: Strategic and Tactical benefits to a traditional balanced 60/40 portfolio

An anti-beta strategy that allocates to U.S. equities in both long and short positions provides the potential to generate positive returns regardless of the direction of the general market. Adding a strategic hedge in the form of an anti-beta strategy can smooth out the return profile, lower volatility and reduce the impact of drawdowns.

	Model 1 60% Global Equities + 40% Global Bonds	Model 2 60% Global Equities + 35% Global Bonds + 5% Anti Beta Strategy	Model 3 55% Global Equities + 35% Global Bonds + 10% Anti Beta Strategy
Annualized Return	8.38	8.32	7.82
Standard Deviation	7.36	7.01	6.41
Sharpe Ratio	0.99	1.03	1.05
Max Monthly Drawdown	-16.54	-15.24	-13.61
Beta*	0.61	0.58	0.5
Up Capture*	65.09	62.74	55.99
Down Capture*	58.27	53.9	44.39
Spread*	6.82	8.84	11.6

*To MSCI ACWI NR CAD

Source: Morningstar Direct & Bloomberg. Period: September 2011 – April 2023. In Canadian Dollars. MSCI ACWI Index (Global Equities), Bloomberg Barclays Global Aggregate Bond Index (Global Bonds), Dow Jones US Thematic Anti-Beta CAD-Hedged Index (Anti-Beta Strategy). For illustrative purposes only. One cannot invest in an index.

The Outcome

As illustrated, an allocation reduced overall portfolio risk while smoothing out the effects of volatility. This is seen in lower portfolio standard deviation and beta, lower drawdowns, an improved spread between upside and downside capture versus equities and stronger risk-adjusted returns.

Publication date: May 19, 2023

The model performance shown is hypothetical and for illustrative purposes only. Past performance is not indicative of future results. One cannot invest in an index. Indexes are unmanaged and do not charge management fees, trading costs or other expenses that would otherwise subtract from the total return.

CI Global Asset Management

Diversify away from traditional fixed income risks with long/short credit

In this lower for longer interest rate environment, investors may be forced to reach for yield by investing in lower quality securities (increasing default risk), adding duration (increasing interest rate risk) or embracing additional liquidity risk in the private markets. A rate neutral long/short credit strategy may offer investors a safe haven from these risks within a liquid investment grade tolerance. Key benefits include enhanced portfolio diversification through reduced correlation to equities and traditional fixed income, a consistent return profile independent of the direction of interest rates and an attractive yield with a low risk profile.

Michael Locke

CFA, CAIA, Manager, Investment Fund Research & Analytics
CI Global Asset Management

Improve client outcomes with long/short equity

Long/short equity strategies are a natural fit for the equity portion of all investors up to and including those with a low-medium risk tolerance. With flexibility to employ sophisticated tools like short-selling and derivatives, long/short equity strategies deliver the benefits of equity ownership with potential for lower volatility, lower correlation to broad equity markets, and better downside protection. For clients investing over the short or medium term, substituting a portion of a plain vanilla equity allocation into a long/short mandate may lead to better investment outcomes within their target holding period. A long/short equity allocation may also provide a smoother ride by delivering better risk management than a long only equity position while generating a similar 'end return.'

Alternatives in action

In the following example, a traditional global 60/40 portfolio is enhanced with a 20% alternatives sleeve comprised of 15% long/short equity and 5% long/short credit. The resulting portfolio offers improved returns (absolute and risk-adjusted), lower volatility and better downside protection.

Traditional 60/40

■ Global equities - 60%
■ Global bonds - 40%

Enhanced 60/40

■ Global equities - 45%
■ Global bonds - 35%
■ Global long/short equity - 15%
■ Long/short credit - 5%

HYPOTHETICAL PERFORMANCE AND FOR ILLUSTRATIVE PURPOSES ONLY

Enhancing Bond Returns with a Long/Short Credit Strategy

RPIA: Case Study

Long/Short credit strategies can help investors generate a higher quality return in their portfolios, without reaching into lower quality bonds or assuming additional equity risk to meet their investment goals.

Employing this strategy allows investors to harness the resiliency of investment grade bonds, which historically have preserved capital, and be less reliant on the direction of interest rates, while also increasing portfolio yield and return expectations.

ADDING A 20% ALLOCATION TO LONG SHORT CREDIT STRATEGY

What are the risks of investing in traditional fixed income?

- Rising yields or inflation expectations leading to negative performance.
- Tight credit spreads and less opportunity for capital gains.
- Higher default risk associated with bonds that provide higher yields.

How does a long/short credit strategy help mitigate risks?

- Ability to manage duration risk and limit losses from increasing yields.
- Can offer capital appreciation without the need for broad spread tightening.
- Can generate reasonable returns while investing primarily in investment grade credit.

Increased efficiency of returns (Sharpe ratio) and average monthly return.

Decreased the average drawdown and beta to the index.

Decreased correlation to traditional Canadian Bonds while maintaining a low correlation to equity indices.

The Resurgence of CTA Trend Following

Auspice Capital Advisors: Case Study

Summary

2022 has reminded investors of the “crisis alpha” reliability that CTAs have long delivered. However, when one considers the longer-term return profile alongside the current market regime, a strong case can be made for **both diversification and return enhancement**.

Commodity Trading Advisors (“CTAs”), also known as “Trend-Followers” and “Managed Futures” have been off most investor’s radars until recently. Unprecedented underwhelming performance was experienced in the two periods spanning 2009-2019. **Prior to this CTAs delivered consistent, uncorrelated returns, and outpaced other asset classes.**

What explains the recent two periods of CTA underperformance?

CTAs attempt to follow trends, both long and short, in global commodity and financial markets. 2011 - 2019 marked an abnormal environment in which quantitative easing and accommodative central bank policy artificially compressed interest rates, volatility, and inflation. Commodities also were in a severe bear market, the worst since the 1930s.

As highlighted red in the table to the right, in 2011-2019 inflation (CPI) and volatility (VIX) were well below historic levels. Opportunities for trend following were brief with periodic bouts of volatility and downtrends, such

as the energy selloff in 2014. CTAs, while still delivering accretive diversification, struggled in terms of standalone returns, particularly given the lack of upwards trends in commodities.

	1987 - 2010	2011 - 2019	2020 - 2022
Average CPI	2.9	1.8	3.3
Average VIX	20.4	16.2%	19.5
CTA Annualized Return	9.2%	0.8%	11.2%

A historic commodity bear market alongside record low volatility and inflation made for a tough CTA environment.

Portfolio Benefits

Given the constrained opportunity set 2011-2019, CTAs have predominantly been used recently for “crisis alpha” or even considered a tail-risk or an insurance-like strategy given strong performance in crises. For example, in 2008 the BTOP 50 CTA Index delivered +14% and more recently +11% again in Q1 2022. However long-term returns are superior to other asset classes, and when considered alongside low volatility and equity correlation, the addition of CTAs to a portfolio is diversifying **and return-enhancing**.

What is the forward outlook?

2020 marked what may be the start of a very new regime. Following a decade of underinvestment in commodity supply, COVID became a catalyst for what may be the next commodity super cycle while the war in Ukraine further heightened volatility. Alongside, quantitative easing is ending, and central banks are now on a very different course in monetary policy.

It is hard to imagine a return to record low interest rates, inflation, and volatility in the near future. In such absence, the data suggests the forward outlook for CTAs is compelling.

1987 - 2022	Stocks MSCI World	Real Estate NAREIT	Commodities GSCI TR	Bonds BB AGG	CTAs BTOP 50
Correlation to Stocks	1.00	0.74	0.29	0.05	0.01
Annualized Returns	6.3%	6.8%	4.2%	5.7%	7.2%
Volatility	15.2%	17.1%	21.3%	3.8%	9.5%
Max Drawdown	-55.4%	-67.2%	-87.2%	7.6%	-16.1%

Options Selling Strategy to Generate Income

Ninepoint Partners: Case Study

Summary

Traditional income generating portfolios tend to rely on higher dividend yielding equities, longer maturing fixed income instruments, or a combination of, to produce returns. In 2022, with the rise in long-term interest rates, equity market drawdowns, and the corresponding increase in correlation between stock and bonds, this approach has produced higher volatility and lower returns than expected.

A cash secured put selling strategy can offer an alternative source of income generation for portfolios, with potentially lower downside exposure than traditional equity allocations, by generating income through a combination of options premiums and short-maturity money market instruments.

To illustrate, we simulate the historical potential portfolio benefits of a cash-secured equity put selling strategy on the S&P 500, when combined with a traditional income focused balanced allocation. We find that over the period examined, risk-adjusted returns are improved when the simulated put selling strategy is substituted for the equity exposure. We also find that standalone downside capture of the put selling strategy is lower than both the equity and balanced portfolio in most of the highlighted periods of market declines.

How it works: A cash secured put selling strategy generates income through a combination of premiums collected from selling put options, and reinvesting the cash held as collateral in short-term money market securities. The put selling index referenced within the simulation, systematically sells 1 year expiry 10% out-the-money put options laddered quarterly, on the S&P 500 underlying. This provides rolling downside protection of -10% before options premiums and investment principal are put at risk contributing to the defensive properties of the strategy.

What are the risks of investing in a traditional income focused balanced allocation?

- Fixed income portfolios may fail to provide sufficient diversification to a portfolio in stressed market environments.
- Investors must take on the higher volatility of equities and longer maturity bonds to generate the desired income through dividends payments and coupons.
- Inflationary periods can drive poor performance for both stock & traditional bond portfolios.

How does a cash secured put selling strategy help manage those risks?

- Improved diversification when undesirable correlation between stocks and bonds occurs.
- Differentiated income stream through harnessing the volatility risk premium inherent in options.
- Higher potential for positive risk adjusted returns in periods of poor risk asset performance.
